Projects History List

OVERVIEW

For over 40 years, Donkersloot & Sons Marine Development Co. has been the "go to" organization for complex construction projects in a marine environment both as a general contractor and a valued subcontractor.

Started in the 1960's by Arie Donkersloot, Sr. who brought his Dutch experience including acknowledge of harsh with him when he emigrated to the U.S. from his native Holland in the 1950's. The company began with Arie's technical training and practical experience in mechanical systems and construction techniques. Equally important, he brought with him his positive "can do" attitude combined with his unique creative abilities.

His sons joined their father in the **1970's** to form the family construction company. In 1989 the company incorporated in Michigan as Donkersloot & Sons Marine Development Co. with Arie Donkersloot, Jr. being named President and Ronald Donkersloot, Sr. named Vice President. Together the second and third generation continue the tradition of innovation and quality workmanship on all their projects.

Donkersloot & Sons has completed projects both on and off shore in at least five states (MI, IN, WI, IL, and FL) and is a listed marine contractor with the US Army Corps of Engineers. This extensive work utilizes many innovative designs and construction concepts and techniques.

The company continues to expand their capabilities in the marine construction industry. In 1989 they added a custom built, innovative 120 foot work vessel, the M/V Miss Jamie Lynn, to support their activities.

Donkersloot & Sons has received several awards in recognition of their outstanding work product. (see samples attached). A partial list of project references demonstrates the diverse capabilities of the company.

In 2009 sons Arie Donkersloot, Jr & Ronald Donkersloot, Sr. bought out their father's interest shares of Donkersloot & Sons Marine Development, Co.

FY2009 Recreational Waterway Maintenance Dredging; Bid No.: 0609010

Provide Labor, Material & Equipment to Mechanically Excavate/Dredge 4788 CY of material from the St. Joseph River Channel in the City of St Joseph, Michigan, in an area measuring 460' long by 50' wide; Barge work vessel, M/V Miss Jamie Lynn, is a 120' x 34' x 6' self propelled vessel with four hydraulic spuds to stabilize and lock down from movement. Aboard the M/V Miss Jamie Lynn will be a containment cell 26' x 26' to contain the dredge spoils An excavator will be placed on the M/V Miss Jamie Lynn deck to remove the shoal and place the material in the containment cell on the deck. The work vessel will dredge the full width of the channel as it advances. Once the cell is filled the M/V Miss Jamie Lynn will transport to the Whirlpool disposal site where the excavator will unload the spoils. A loader will be utilized to relocate and stock pile the dredge spoils to its designated destination on site. Dredging will begin at the downstream side of the dredge area and advance upstream.
